

# Cable and Pipe Entry Products

## Cable penetration by design

***Design-A-Flange | KLIKSEAL® | RUTASEAL® | TSS***

## Design-A-Flange

Our new and revolutionary flange system allows you to configure your own flange, based on your needs. You can now have a flange that lets you choose the size openings you want, how many you want and where you want to place them. All openings come with pop-out membranes, and if you need cable anchorage you can either use a KLIKSEAL® or a cable gland directly in the flange. The system allows for changes being made to the configuration later on, should your needs change.

**See page 21 - 30 for more information.**

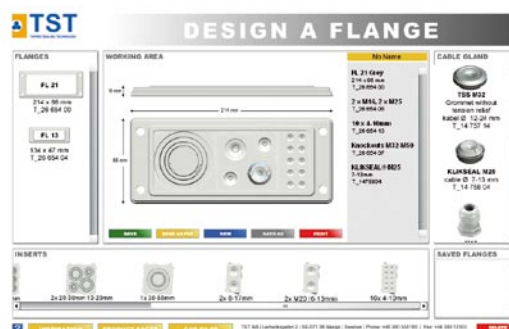

## Design-A-Flange configuration software

To help you design your own Design-A-Flange we have created a software that is very easy to use, by using drag-and-drop.

*The software can be used from our website:*

**[www.tst-ab.com/daf\\_tst](http://www.tst-ab.com/daf_tst)**

## New version of KLIKSEAL®

Based on market requests we are coming out with a new version of KLIKSEAL® that will work in thinner materials. The new version will work in material thickness from 0,7 mm and upwards.

**See page 9 for more information.**

# The Company

*Offices in Nässjö Sweden*

Tapper Sealing Technology AB is the production and export division of Rutab AB, Sweden's leading supplier of cable and pipe entries. Our offices and production facility are located in Nässjö, in south central Sweden – one of the country's major logistical centers.

Rutab was founded 1987 and its first sales year was 1988. The company's primary field is electrical installation material marketed to wholesalers and OEM's. Rutab has had an eventful development, but the business idea has always been to market high quality products at economic prices with extremely swift delivery service.

The product range contains a mixture of own production, brand products and agency products. The core of our range is cable and pipe entries, where our aim is to always be a step ahead of the competition with as complete range as possible.

Both Tapper Sealing Technology and Rutab are ISO approved to ISO 9001 and ISO 14001.

Rutab and TST are since January 2007 partly owned by one of Sweden's largest industrial groups, Nordstjernan.

## **Production**

We constantly put a lot of resources into our own product development.

We are in the process of building up and developing production of our own designed products produced in rubber and plastic. One example of this effort is our RUTASEAL® rubber grommets, produced with an automated production technique for rubber items, developed entirely within our own company. Another example is KLIKSEAL®, a 2-component injection molded cable and pipe seal with cable anchorage, which also is produced with a completely automated production technique developed within the company. The TSS is designed to replace cheaper and simpler sealing products available on the market. It is a very flexible end-plug/grommet for all applications, with a number of different features not available in competitor products. It is produced using techniques previously unique to rubber manufacturing. Design-A-Flange is the latest example of advanced production technique in a new and innovative product.

*Production facility in Nässjö, Sweden*

## KLIKSEAL®

**KLIKSEAL®** is a revolutionary two-component grommet with cable anchorage – something completely new to the market. Through innovation and advanced production technology, we have designed a product that has many of the advantages found in a cable gland.

Apart from the cable anchorage, **KLIKSEAL®** is compact, self-adjusting to its surrounding wall thickness (patented), click-fixed in place (patented), has a membrane seal, is waterproof, requires very little effort to install with its collapsible outer membrane (patented), and saves up to 90% of your time.

The installation of a **KLIKSEAL®** requires no tools and has a "pushout" membrane that is a permanent seal until penetrated by a cable or pipe. Each size of **KLIKSEAL®** can be used with a large range of cable and pipe diameters. An M25 can be used for cables and pipes ranging from 4 mm to 13 mm. Because of its compact design, the **KLIKSEAL®** only extends 5,7 mm outside the housing on which it is mounted.

## Product Benefits

### Cable Anchorage

KLIKSEAL® is tested and certified to Cable Anchorage Type A - the same standard most cable glands are approved to.

### Compact design

Designed to blend in with its surrounding.  
Product thickness is only 17-20mm, with a protrusion of 5,5 - 5,7 mm on the outside (M20-M25). A cable gland has a protrusion of 30-40mm.

### Klik

KLIKSEAL® is an ergonomic product that requires no torque or force during installation. It simply "klikes" into place.

### Self adjusting to wall thickness

The ability to self adjust to the wall thickness means there is no need for a lock-nut to install a KLIKSEAL®.

### Fixed in place

When a KLIKSEAL® has been installed it is fixed in both directions like a cable gland and cannot be removed unintentionally.

### IP67 = water tight

KLIKSEAL® is water and dust proof, which means that you do not need to worry if you have chosen the right protection class.

### "Pop-Out" membrane

KLIKSEAL® is equipped with a "Pop-Out" membrane which means the opening is sealed until the membrane is popped out. This means it will protect against dust and moisture even if a cable has not been installed.

### Rubber coated tension relief for protection of the cable mantle

To avoid possible damage to the mantle of cables installed in a KLIKSEAL® the arms providing cable anchorage are coated with TPE. TPE is a plastic material with a "rubbery" texture that works as a protection between the harder plastic and the cable mantle. It also provides dampening against vibration.

### Save up to 90% on installation time.

KLIKSEAL® is a superior economic solution as it saves up to 90% on the complete installation time.

### Ergonomic installation without tools

Center the KLIKSEAL® in the opening, push with both thumbs until it "klikes" into position. Install the cable by pushing it through the grommet.

## Product features TKS KLIKSEAL®

Height of only 17-20 mm, 5,5 - 5,7 mm on the outside depending on size. Cable glands are approx. 30-40 mm.

Handles large range of cable and pipe diameters.

Installation time saving of up to 90%.

Self-adjusting to wall thickness.

Ergonomic installation

Fixed in both directions when mounted.

Integrated tension relief

IP67

"Pushout" membrane

Space saving design

KLIK = No material compression during installation.

Rubber coated tension relief for protection of the cable mantle.

Center the KLIKSEAL in the opening (from the inside), push evenly with both thumbs until it "klicks" into place.

Insert the cable from the side with the polyamide tabs.

**Note! KLIKSEAL® is installed from the inside.**

## Material

TPE and Polyamide 66 - Halogen Free  
UL approved material

Integrated cable anchorage,  
wide sealing range.

Material thickness 1,5 - 5 mm

Material thickness IP67/65 2 - 5 mm

Quick and simple assembly without  
the use of tools.

# Examples of applications for KLIKSEAL®

## Enclosures and Cabinets

## Light fixtures

## RUTASEAL® Rubber Grommets

**RUTASEAL®** is very simple to use and demands no tools, which in turn means lower work cost. It requires no screw-driver or scissors to make the hole, which otherwise would endanger the IP-class seal. **RUTASEAL®** is SEMKO tested for IP67 internally and externally. The chloroprene version is also DNV approved. **RUTASEAL®** is produced in EPDM and Chloroprene in both PG and Metric. The seals are produced in black, light grey and grey. **RUTASEAL®** has a very high finish and the automatic method of production guarantees the same even and high quality on all products at all times.

## Product features RUTASEAL® & RUTASEAL LIGHT®

IP Class: IP67 (external)

Both Metric and PG programmes

Internal / External holes IP67

Produced in halogene-free EPDM or Chloropren.

Hardness:  
60 ± 5 (Shore density)

Suits material thickness  
0,5 - 4 mm both in plastic  
and metal.

"Pushout" membrane with  
0,25 mm thickness

Internal / External  
holes IP67

RUTASEAL can be assembled  
from either end depending upon  
the application.

Push the grommet into the hole.

Pierce the grommet with the cable.

The grommet is then locked in position by pulling it back.

# RUTASEAL® EPDM Metric

## Material

EPDM - Halogen Free  
Resistant to chemicals and weatherproof.

## Mode of protection

Suitable for holes in materials of  
0,5 - 4 mm thickness.  
Quick and simple assembly without the  
use of tools.

## Temperature range

IP67 acc. to EN 60529

## Test standard

-40°C....+110°C <sup>(1)</sup>

# RUTASEAL® Chloroprene PG

## Material

Chloroprene  
Resistant to chemicals, ageing and weatherproof.

## Mode of protection

Suitable for holes in materials of  
0,5 - 4 mm thickness.

Quick and simple assembly without the  
use of tools.

## Temperature range

IP67 acc. to EN 60529

-30°C....+100°C <sup>(1)</sup>

## Test standard

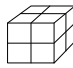

EMKO TUI (03-SEC) FI 001/84

## TSS

The **TSS** is the latest addition to the TST grommet range.

What makes the **TSS** different from existing products on the market are the built-in features that you do not find in this otherwise relatively simple product.

**TSS** handles an exceptionally large cable span.

It is the only "simple" grommet manufactured in a rubber-like material, and the only TPE-based end-plug.

With the "**pushout**" membrane you always have a round opening and are guaranteed to have IP67.

The **TSS** is equipped with a sock that closes tight around the cable and allows for it to be moved around like a "**joy-stick**" in the opening without endangering the IP-classification. So it works extremely well with cables passing through at an angle.

The design makes sure that the grommet stays in place, even when large cables are installed.

These are some of the features that creates a lot of value added in the **TSS**, and makes it a unique product.

## Product features TSS

End-plug/grommet for  
all applications

Self-adjusting to  
cable diameter

Ergonomic  
installation

Significant  
timesaving

Handles exceptionally  
large cable-  
span 5 - 24 mm

IP67 =  
Waterproof

Suits material thickness  
0,5 – 4,5 mm

Secure installation  
in opening

Easy and fast  
installation

Temperature range  
-50°C....+125°C

"Joy-stick" effect  
thanks to built-in sock

"Pushout"  
membrane

Not for  
temporary use

*Push the grommet into the hole.*

*Pierce the grommet with the cable.*

# Why TST Grommets

## What makes our grommets different from the competition?

- Totally automated production in all phases. Production method guarantees an exact quality on all types at all times, also giving very aesthetically pleasing products.
- No tool is required at application, thereby lower work cost. No screwdriver required to make a hole, which often makes an uneven hole adventuring proofing. No scissors to cut off a teat, which often gives wrong size for guaranteed proofing.
- The opening is always sealed until the membrane is pushed out – no need for stop-plugs or blind plugs in the mean time, which creates extra costs.
- Quick and easy installation from one side only -- not necessary to be able to reach opposite side of installation to attach locknut.
- Ergonomically better, no strain on wrists since it does not need to be screwed into place.
- Ideal where space is restricted - less protrusion and space needed. Available in PG & Metric sizes and in several colours and materials.
- All are SEMKO approved for IP67. DNV approval for RUTASEAL® in Chloroprene. KLIKSEAL® approved for cable anchorage type A.
- Superior grommets, both economically and in quality.
- Our new packaging-line allows for customer specified package –size and -labels, should standard sizes and labels not fit your needs.

## DESIGN - A - FLANGE

With **Design-A-Flange** we are introducing a brand new flange concept, with an unparalleled level of protection and flexibility.

**Design-A-Flange** is an innovative modular system where inserts can be changed depending on your needs. You can design your own configuration based on how many openings you want, where you want them placed, and what type of seal you want to have. You are no longer forced to use a fixed flange with a certain number of pre-determined openings. You choose the configuration that suits your needs.

The push-out membranes ensures fast and easy installation without worries about achieving the correct IP-level. Should you want cable anchorage on certain cables then just install a Klikseal or a cable gland in the flange. If a cable no longer will be used you can seal the opening either by replacing the insert or cutting out the membrane and sealing the opening with one of our grommets.

### ***Cable penetration by design***

Design-A-Flange offers a number of features that you cannot find in any other flange solutions

- Design your own configuration, with the right size openings, and right number of openings placed where you want them
- Push-out membranes to make installation fast, easy and fool-proof
- High IP-protection
- No need to drill separate holes to install a Klikseal or a cable gland
- The inserts are easily changed to adapt to new needs
- Very easy to seal an opening that no longer will be used

## The design and technique

Design-A-Flange is very compact in its design and very easy to install. Just slide the inserts together, place them in the frame and install. The inserts lock on to each other as well as to the frame, ensuring a safe and secure installation. Fiberglass re-inforced Polypropylene is used for the frame and the inserts, ensuring a very rigid structure. The soft TPE lets us incorporate push-out membrane seals with exceptional sealing properties. The two materials together with our patented system make it possible to have a flange system with a very slim design. Design-A-Flange is made to have low protrusion and will take up very little space. This allows for very discrete and aesthetic installations. You can even have cable anchorage on your cables by using KLIKSEAL® and still have an installation that takes up a minimum of space. Design-A-Flange is available in the sizes that are most commonly used on the market today. The system is continuously growing and we are sure you will find a version that suits your needs.

## Have you ever used a flange with too many pre-determined openings in strange size-configurations that never will be used?

You are no longer forced to use a flange where someone else has decided what size openings, how many, and where they are placed. A pre-determined solution where you often end up having quite a few openings unused is now a thing of the past.

With Design-A-Flange you have the freedom to decide where the inserts are placed, and where the different size openings should be in the frame. You are then able to get a sealing solution that is easier to install, and a very clean uncluttered cable installation.

With Design-A-Flange you can either choose a pre-configured kit or design your own configuration - allowing for a completely tailor made solution.

## Have you ever worried about incorrect installations?

All our Design-A-Flange inserts are equipped with push-out membranes. No tools are needed to install the cables. Just push the cables through the membrane of the seal and the installation is complete. Since you always will have a round opening, you are guaranteed to have IP65. You do not need to worry about cutting the right size opening to match the diameter of the cable, or that you made the opening uneven and therefore endangered the IP-classification. Our inserts are designed to avoid these worries and to make sure you have a safe and secure installation with a minimum of work.

The bottom side of the membrane-seal is equipped with a sock that fits tightly around the cable, assuring the IP class even when the cable passes through at an angle.

## Have you ever used a flange that is IP65 until you install a cable in it?

A common issue with today's flanges is that either the IP-rating decreases as soon as a cable is installed, or you cannot get a protection level of at least IP65.

With Design-A-Flange you can now have a flange system that is rated IP65, with or without cables installed. For the first time ever you have a flange that provides exceptionally high IP-protection and flexibility.

## Have you ever been forced to use a cable gland in addition to a flange to fulfill the demands placed on your installation?

Design-A-Flange and its interchangeable inserts give you an extremely flexible flange solution, allowing you to combine different types of seals. If our water- and dust proof membrane seals are not enough you can cut them out or choose the knock-out insert and install a Klikseal or a cable gland. You can then have cable anchorage for those cables needing this. This gives you the ability to combine different levels of strain relief and IP-rating in the same flange. Design-A-Flange offers tremendous flexibility as you have the possibility to adapt the system even after installation, to fit changing needs or new installations. For the first time ever you are allowed to design a flange solution that suits all your needs – from cable placement to sealing type.

## Have you ever wanted to seal an opening where a cable used to be installed?

If you no longer need to use a certain cable it is not necessary to replace the whole flange to seal the opening. You can replace the affected insert with a new one – leaving all other cables installed. Depending on the size of the opening you can also seal the opening by cutting out the membrane seal and installing one of our grommets. The opening can then be “re-used” when needed. Either way you save both time and money compared to other flange solutions.

## Have you ever worried about needs changing in the future?

You can choose if you want to have a configuration that is suited for today's needs or one that allows flexibility for the future. Even if your needs change in the future and you did not initially plan for this, you do not need to worry as the inserts can be changed to fit your new demands.

# DESIGN-A-FLANGE

## Product advantages Design-A-Flange

**Interchangeable  
inserts**

**Design your  
own solution**

**Compact design**

**IP65, with or  
without cables**

**"Pop-out"  
membranes.**

**"Free placement"  
of openings**

**Possible to  
change  
configuration  
later on.**

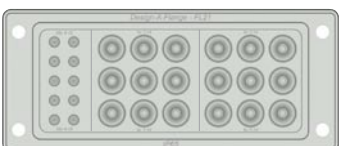

**KLIKSEAL® or cable  
gland installation  
in the flange.**

# Preconfigured Kits FL21

T\_26 654 01 / 19

T\_26 654 02 / 20

T\_26 654 03 / 21

## Material

Fiberglass re-inforced Polypropylene  
and TPE - UL approved materials  
Halogen-Free

## Mode of protection

IP65

## Temperature range

-20°C....+125°C <sup>(1)</sup>

## Test standard

EN 60529:1991 + A1  
EN 60670-1:2005, EN 50262:1998  
EMKO-TUI(03-SEC)FI001/84  
816003

## Semko report

816003
