## • Technical data

- Binding for the applications of connectors are the requirements of the equipment specifications of the users.
- We reserve the right to change the design due to improvements in quality, further development or production requirements.
- All technical data mentioned in this catalog are related to connectors, meaning connecting devices which in normal use (when under load) shall not be inserted or withdrawn.
- Regarding the CE marking it has to be noted that electronic components such as connectors are not subject to a marking, and therefore must not be marked with a CE mark. This is confirmed by the rules of the European commission for low voltage and EMC guidelines.
- The listed technical data are intended to help selecting the appropriate product and to secure a proper application.
- The connectors are developed and designed for the use in the field of equipment, control and electrical appliances. Whether they also can be used in other applications has to be checked by the user.
- When mounting electrical conductive socket housings, they have to be integrated into the protection measures.
- The wires to be connected shall be stripped only so far that distances to conductive parts are not shortened. When wires are soldered, it has to be beared in mind that no single strands stick out and no short circuit can occur.
- All dimensions in this catalog are in mm.
- For connectors with strain relief the following minimum parameters are valid:

		Recommended tightening torque of the pressing screw
2-3	Cable $\Phi$ : min.20N	30-40 Ncm
3-4	Cable $\Phi$ : min.30N	30-40 Ncm
4-5	Cable $\Phi$ : min.40N	80-100 Ncm
5-6	Cable $\Phi$ : min.50N	80-100 Ncm
6-7	Cable $\Phi$ : min.60N	80-100 Ncm
7-8	Cable $\Phi$ : min.70N	80-100 Ncm
8-12	Cable $\Phi$ : min.80N	100-140 Ncm

## • Connectors

Connectors are components which are not to be engaged or disengaged in normal use (under live).

## • Plug and socket devices

Plug and socket devices are components which in normal use (under live or load) may be engaged or disengaged when live or under load.

## • Termination methods

### • Screw termination

A Screw termination is a detachable electrical connection between a conductor and a screw clamp. Screw clamps are designed acc. to DIN/EN 60999/VDE 0609. The chart below shows the screw size and the required clamping and testing torque.

Screw size	M2.5	M3	M3.5
Torque(Ncm) Cap screw	40	50	60
Headless screw	20	25	40

### • Solder connection

Besides the soldering of single wires with solder irons or soldering machines, the method of wave soldering or infra-red vapor phase soldering has gained great importance for connectors for printed boards or flexible wiring.

We recommend the following soldering parameters

- hand-soldering: soldering bold temperature max. 370° C/max. 4s
- dip soldering: soldering bath temperature max. 270° C/max. 4s
- alternativ dip soldering: soldering bath temperature max. 260° C/max. 10s

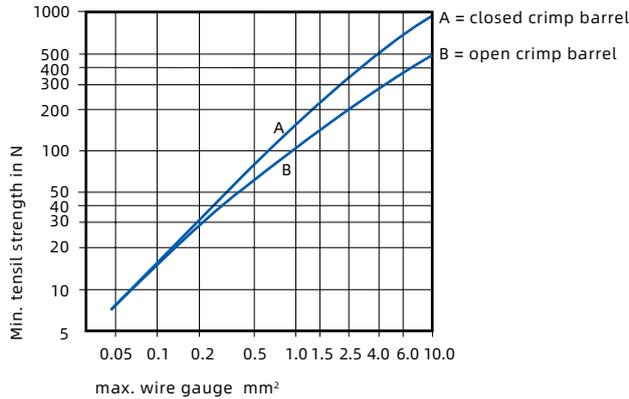

When wires are soldered, it has to be watched that no single strands stick out which could lead to a short circuit and that no large solder joints occur which would reduce the clearance and creepage distances unfavourably. Testing and valuation of solder joints and the relevant components is regulated in DIN EN 60068

• Technical data

• Crimp connection

A crimp connection is a non-detachable electrical connection between a conductor and a crimp contact produced with the crimp technology. The requirements for crimp connections are defined in DIN IEC 60352 part 2.

An important point for the quality of a crimp connection is the achieved tensile strength of the termination. Since easy to measure, the tensile strength is a practicable means for quality control purposes. The diagram below shows the required minimum tensile strength depending on the wire size.

• American Wire Gauges

Since various areas of industry are also using wires according to the American Wire Gauge (AWG), the following comparison chart is included to allow a cross reference between AWG and metric wire sizes

AWG	Wire composition (mm)	Wire-Ø (mm)	Wire gauge (mm²)
30	1 x 0.25 7 x 0.10	2-3	2-3
28	1 x 0.32 7 x 0.13	3-4	3-4
26	1 x 0.40 7 x 0.16 19 x 0.10	0.40 0.48 0.51	0.13 0.14 0.15
24	1 x 0.51 7 x 0.20 19 x 0.13	0.51 0.61 0.64	0.21 0.22 0.25
22	1 x 0.64 7 x 0.25 19 x 0.16	0.64 0.76 0.81	0.33 0.34 0.38
20	1 x 0.81 7 x 0.32 19 x 0.20	0.81 0.97 1.02	0.52 0.56 0.60
18	1 x 1.02 19 x 0.25	1.02 0.27	0.82 0.93
16	19 x 0.29	1.44	1.25
14	19 x 0.36	1.80	1.93
12	19 x 0.46	2.29	3.16
10	19 x 0.56	3.10	4.65

• Composition and dimensions of commonly used copper wires based on VDE 0295

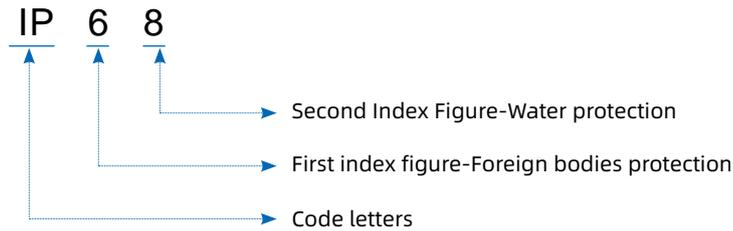

Wire gauge (mm²)	Wire composition (mm)	Wire-Ø (mm)
0.09	12 x 0.10	0.5
0.14	18 x 0.10	0.5
0.25	14 x 0.16 32 x 0.10	0.7 0.7
0.34	19 x 0.16 42 x 0.10	0.8 0.9
0.5	7 x 0.30 16 x 0.21 28 x 0.16	1.0 1.1 1.1
0.75	7 x 0.37 24 x 0.21 42 x 0.16	1.2 1.2 1.3
1.0	7 x 0.43 32 x 0.21 56 x 0.16	1.4 1.4 1.5
1.5	7 x 0.52 30 x 0.26 84 x 0.16	1.6 1.7 1.8
2.5	7 x 0.67 50 x 0.26 140 x 0.16	2.2 2.3 2.3
4.0	7 x 0.85 56 x 0.31 224 x 0.16	2.7 2.8 2.9

It has to be noted that wires of the same AWG number but with different composition have slightly different mm²!

• Hoods/housings connector insert protection

For safety reasons, connectors have to be protected from outside influences like dust, foreign objects, direct contact, moisture and water. This protection is provided on industrial connectors by their housings with their latching devices and sealed cable entries. The degree of protection can be selected depending on the type of intended use. The standard IEC 60529 and/or DIN EN 60529 has specified and divided the degree of protection into several classes.

The degree of protection is indicated in the following way:

Index figure	Degree of protection	Index figure	Degree of protection
0	No protection: No protection against accidental contact, no protection against solid foreign bodies	0	No protection against water
1	Protection against large foreign bodies: Protection against contact with any large area by hand and against large solid foreign bodies with $\varnothing > 50$ mm	1	Drip-proof: Protection against vertical water drips
2	Protection against medium sized foreign bodies: Protection against contact with the fingers, protection against solid foreign bodies with $\varnothing > 12$ mm	2	Drip-proof: Protection against water drips (up to a 15° angle)
3	Protection against small solid foreign bodies: Protection against tools, wires or similar objects with $\varnothing > 2.5$ mm, protection against small foreign solid bodies with $\varnothing > 2.5$ mm	3	Spray-proof: Protection against diagonal water drips (up to a 60° angle)
4	Protection against grain-shaped foreign bodies: As 3 however $\varnothing > 1$ mm	4	Spray-proof: Protection against splashed water from all directions
5	Protection against injurious deposits of dust: Full protection against contact. Protection against interior injurious dust deposits	5	Hose-proof: Protection against water (out of a nozzle) from all directions
6	Protection against ingress of dust: Total protection against contact. Protection against penetration of dust	6	Strong hose-proof: Protection against strong water (out of a nozzle) from all directions
		7	Protected against immersion: Protected against temporary immersion
		8	Water-tight: Protected against water pressure

- [Voltage grading of connectors \(insulation coordination\)](#)

Clearances and creepage distances are the base of voltage grading of connectors. Valuation and dimensioning of clearances and creepage distances have changed since the introduction of insulation coordination. The following standards apply for this:

- IEC 60664-1/11.92 Insulation coordination for equipment within low-voltage systems
- DIN VDE 0110/4.97 Insulation coordination for equipment within low-voltage systems

Insulation coordination comprises the selection of the electrical insulation performances of an equipment (e.g. connector), taking into account the expected use and its environment.

- [In this respect some definitions are explained in short:](#)

**Rated voltage:** The value of voltage assigned by the manufacturer to the connector and to which operation and performance characteristics are referred.

**Rated impulse voltage:** The value of an impulse withstand voltage assigned by the manufacturer to the connector characterising the specified withstand capability of its insulation against transient overvoltages.

**Clearance:** The shortest distance in air between two conductive parts.

**Creepage distance:** The shortest distance along the surface of the insulating material between two conductive parts.

- [Voltage grading of connectors \(insulation coordination\)](#)

**Overvoltage categories:** The standard has divided the possible overvoltages into four categories. The three categories which relate to connectors are shortly described below:

[Overvoltage category I](#)

Equipment (e.g. connectors) intended for the use in applications or parts of installations in which no overvoltage can occur. Examples are low voltage equipments.

[Overvoltage category II](#)

Equipment (e.g. connectors) intended for the use in installations or parts of it, in which lightning overvoltages do not need to be considered, however switching overvoltages generated by the equipment. Examples are household appliances.

[Overvoltage category III](#)

Equipment (e.g. connectors) intended for the use in installations or parts of it in which lightning overvoltages do not need to be considered, however switching overvoltages generated by the equipment, and for cases where the reliability and the availability of the equipment (e.g. connectors) or its dependent circuits are subject to special requirements. Examples are protecting means, switches and sockets.

[Material groups](#)

For the dimensioning of the creepage distance, the tracking formation of the insulating material used by the manufacturer has to be considered. The materials are separated into three groups according to their CTI values (Comparative Tracking Index):

Material group I  $600 \leq \text{CTI}$

Material group II  $400 \leq \text{CTI} < 600$

Material group III  $175 \leq \text{CTI} < 400$

- [Pollution degree of connectors](#)

**Pollution degree:** The expected pollution around the equipment (e.g. connector) was established in the standard in four degrees:

**Pollution degree 1:** No pollution or only dry, non-conductive pollution occurs. The pollution has no influence. Examples: The inside of electrical measuring instruments, electronic measuring devices.

**Pollution degree 2:** Only non-conductive pollution occurs. Except that occasionally a temporary conductivity caused by condensation is to be expected.

Examples: Household appliances, installation material, lamps, power supplies of office equipment.

**Pollution degree 3:** Conductive pollution occurs or dry non-conductive pollution occurs which becomes conductive due to condensation which is to be expected.

Examples: Electrical equipment of machine tools and processing machines, low voltage switches at machine tools.

**Pollution degree 4:** The pollution generates persistent conductivity caused by conductive dust or by rain or snow.

Examples: Equipment on wagon roofs and beneath wagons at electrical locomotives, rail cars, trolley busses. Equipment at electrical locomotives underground.

**Additional remarks:** If connectors being defined for pollution degree 1 and overvoltage categorie 1 are applied for other conditions (higher pollution degree and higher overvoltage category), voltage levels reduce correspondingly. But the connectors can be used without any problems at reduced maximum voltages.

It has to be noted that for a connector with a degree of protection of at least IP 54 the parts inside the enclosure may be dimensioned for a lower pollution degree. This also applies to mated connectors whose enclosure is ensured through the connector housing and which may only be disengaged for test and maintenance purposes.

• Current carrying capacity

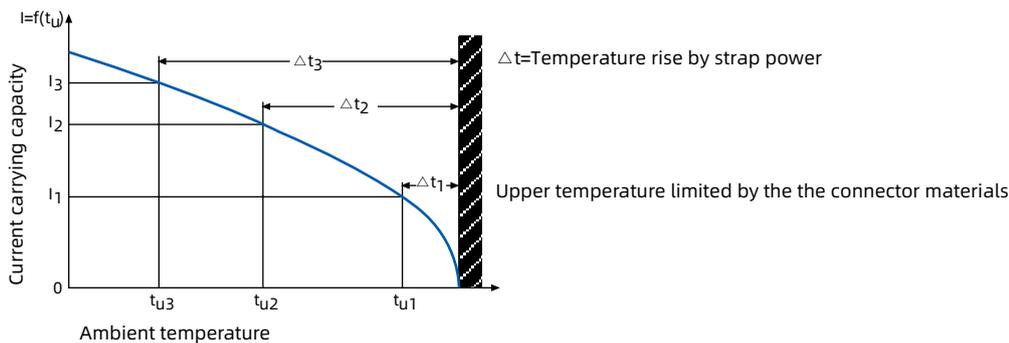

The current carrying capacity of a connector denotes the current that can be carried continuously and simultaneously through all its contacts. It is determined by testing following the standard DIN IEC 60512.

The upper limit temperature results from the thermal properties of the contact and insulating materials. The sum of the ambient temperature and the temperature created by the current flow may not exceed the upper limit temperature of the connector.

This means, that the current carrying capacity is no fixed value but decreases with increasing ambient temperatures. This relation between current, the caused temperature rise and ambient temperature of the connector is depicted in a curve, the so-called derating curve. As one can see, the current carrying capacity decreases with increasing ambient temperature.

On the other hand, very often not all contacts are loaded simultaneously with the whole rated current, so that some single contacts can carry a higher current than that according to the derating curve. These currents have to be determined by testing.

Derating curve:

• Shielding, Electromagnetic compatibility (EMC)

Since the issue of the German law about electromagnetic compatibility of equipment, more attention is paid to EMC within the concerned equipment.

The equipment has to be designed in such a way that:

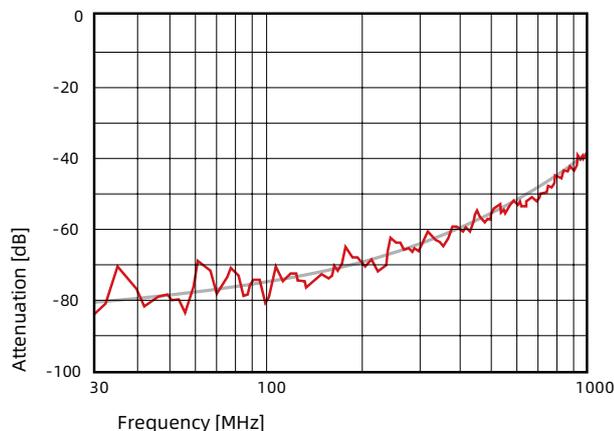

1. the generation of electromagnetic interference is limited to such extend that the determined operation of this equipment is not hampered,
2. the equipment has a reasonable resistance against electromagnetic interference so that the determined operation is not hampered.

To satisfy the requirements of the equipment manufacturers, more and more connectors with shielding properties are applied where shielded cables can be connected. In use are conductive housings to which the cable shield can be terminated. In case of circular connectors, it should be watched that the cable shield is carefully connected to the connector shield. A circumferentially (360°) contact is optimal in this case. Good shielding values (and very often sufficient for practical use) are also achieved when the shielding braid is firmly connected to the conductive housing. Not sufficient are fully plastic connectors without metal sleeves with no possibility to terminate the cable shield.

Furthermore, it is important that during mating a secure electrical connection between plug and socket housing is achieved and that the panel mounted connector part has a good metallic connection with the chassis wall.

The shielding attenuation is stated in decibel (dB) and depends on the frequency. Good shieldings have a high attenuation, which over a large frequency band (MHz) does not decrease too heavily.

Attenuation curve acc. to DIN 47250-6  
Example 360° shielding: M12-A series

Two material groups are used to manufacture the connectors described in this catalog:

- 1: Metals for contacts and housings
- 2: Plastic material for inserts and housings

## Materials for contacts

The properties of contacts are defined to a large extent by the used materials. Decisive features are:

- strength and spring properties
- electrical conductivity
- max. operating temperature

Considering these points, Wain is using proven copper-alloys for the manufacture of contacts;

## Materials for metal housings

Depending on the application, the metal housings are produced from either brass, zinc die-cast or an aluminium alloy. For circular housing parts, mainly brass is used due to its good machine ability and strength. For angled housings and parts with minor finishing work, zinc diecast or an aluminium alloy is used.

## Plastic material for inserts

The inserts of Wain-connectors are manufactured primarily from PBT (Polybutylen-terephthalate), a plastic material with a temperature stability of up to 130 °C and special properties for high grade moulded parts. The material has very good chemical and electrical properties and very good dimensional stability.

## Surface finishes

In order to protect contacts and housings from aggressive environments and to improve the conductivity, the surfaces are treated accordingly. At wain, contacts are gold or silver plated. These platings improve the conductivity and are very corrosion-proof. For applications in the mA-range at very low voltages, gold plated contacts are recommended to improve the electrical properties and in addition, it increases the corrosion-proofness. Housings are anodised or covered with a plating of either nickel or chromium for anti-corrosion and decorative reasons.

## Material for sealing gaskets

To achieve the required protection class, all Wain circular connectors are equipped with sealing rings of an elastomeric material. Depending on the final use, wain has selected Chloroprene Rubber (Trademark Neoprene), Nitrid Rubber (Trademark Perbunan) or Fluorsilicon Rubber (Trademark Viton). The chemical resistance of these elastomeric materials can be depicted from table on page 16-09.

## Plastic material for housings

Plastic housings are primarily manufactured from PA (Polyamide). This wellproven material (internationally known under the name Nylon) is very tough, non-abrasive, resistant against solvents, oils and greases and can be used at temperatures up to 120 °C .

## • Important data of used metals

Material	Letter symbol	Conductivity ( $\frac{m}{\Omega \times mm^2}$ )	Tensile strength (N/mm <sup>2</sup> )	Limit temperature (°C)	Corrosion resistance <sup>1)</sup>
<b>Coatings</b>					
Gold	Au	44	-	-	Very good

- The standards used in this catalog for definition and testing of the connectors are described below in more detail. These are:

### IEC 60664-1; (2007-4), Insulation coordination

This international standard, which is identical to the German standard DIN VDE 0110-1 issued April 1997, is a basic safety standard to achieve insulation coordination. It provides the information necessary to specify clearances, creepage distances and solid insulation for electrical equipment (e.g. connectors), taking into account the expected micro-environment and other influencing stresses to which it is likely to be subjected during its anticipated lifetime. Included are methods for voltage testing in regards to the insulation coordination.

### IEC 60512; (2001-1), Testing procedures and measuring methods

This international standard, which is identical with the European standard DIN EN 60512, has replaced the earlier German standard DIN 41640. It is the basic standard for testing procedures and measuring methods for electromechanical components (e.g. connectors). The standard is very comprehensive and consists of nine parts in total in which all electrical, mechanical and climatic tests are described. Furthermore, it contains tests about solderability, sealing, shielding and cable strain relieve.

### IEC 60529; (2001-2), Degrees of protection provided by enclosures (IP-Code)

This international standard, which is identical with the European standard DIN EN 60529 and the German standard DIN VDE 0470-1 of Nov. 1992, defines the designation, requirements and testing for the classification of degrees of protection by enclosures for electrical equipment (e.g. connectors). It classifies the protection against access to hazardous parts, protection against foreign objects and protection against ingress of water. The degree of protection is indicated by an IP-Code.

### IEC 60068-1; March 1995, Environmental testing

This international standard, which is identical with the European standard DIN EN 60068, contains basic procedures for environmental tests and test severities. The test procedures are intended to prove the resistance of components against expected environmental influences under working conditions. Typical tests are: cold, dry and damp heat, shock, vibration, temperature change and more.

### DIN EN 61984 (VDE 0627); 2009-11, Connectors and Connection devices

This international standard is applicable for plug connectors with rated voltages ranging from 50 V to 1000 V AC and DC and rated currents up to 500 A per contact for which there is either no detail specification (DS), or if the detail specification with reference to the safety requirements is based on this standard. This standard may be used as a guide for plug connector with rated voltages up to 50 V. In this case the design for clearances and leakage paths must be based on IEC 60664-1.

This standard may also be used as a guide for plug connectors with rated voltages greater than 125 A per pole.

This standard is not applicable for plug connectors in or on equipment for which there are application-specific safety requirements for plug connectors.

Standards: IEC-61076-2-104

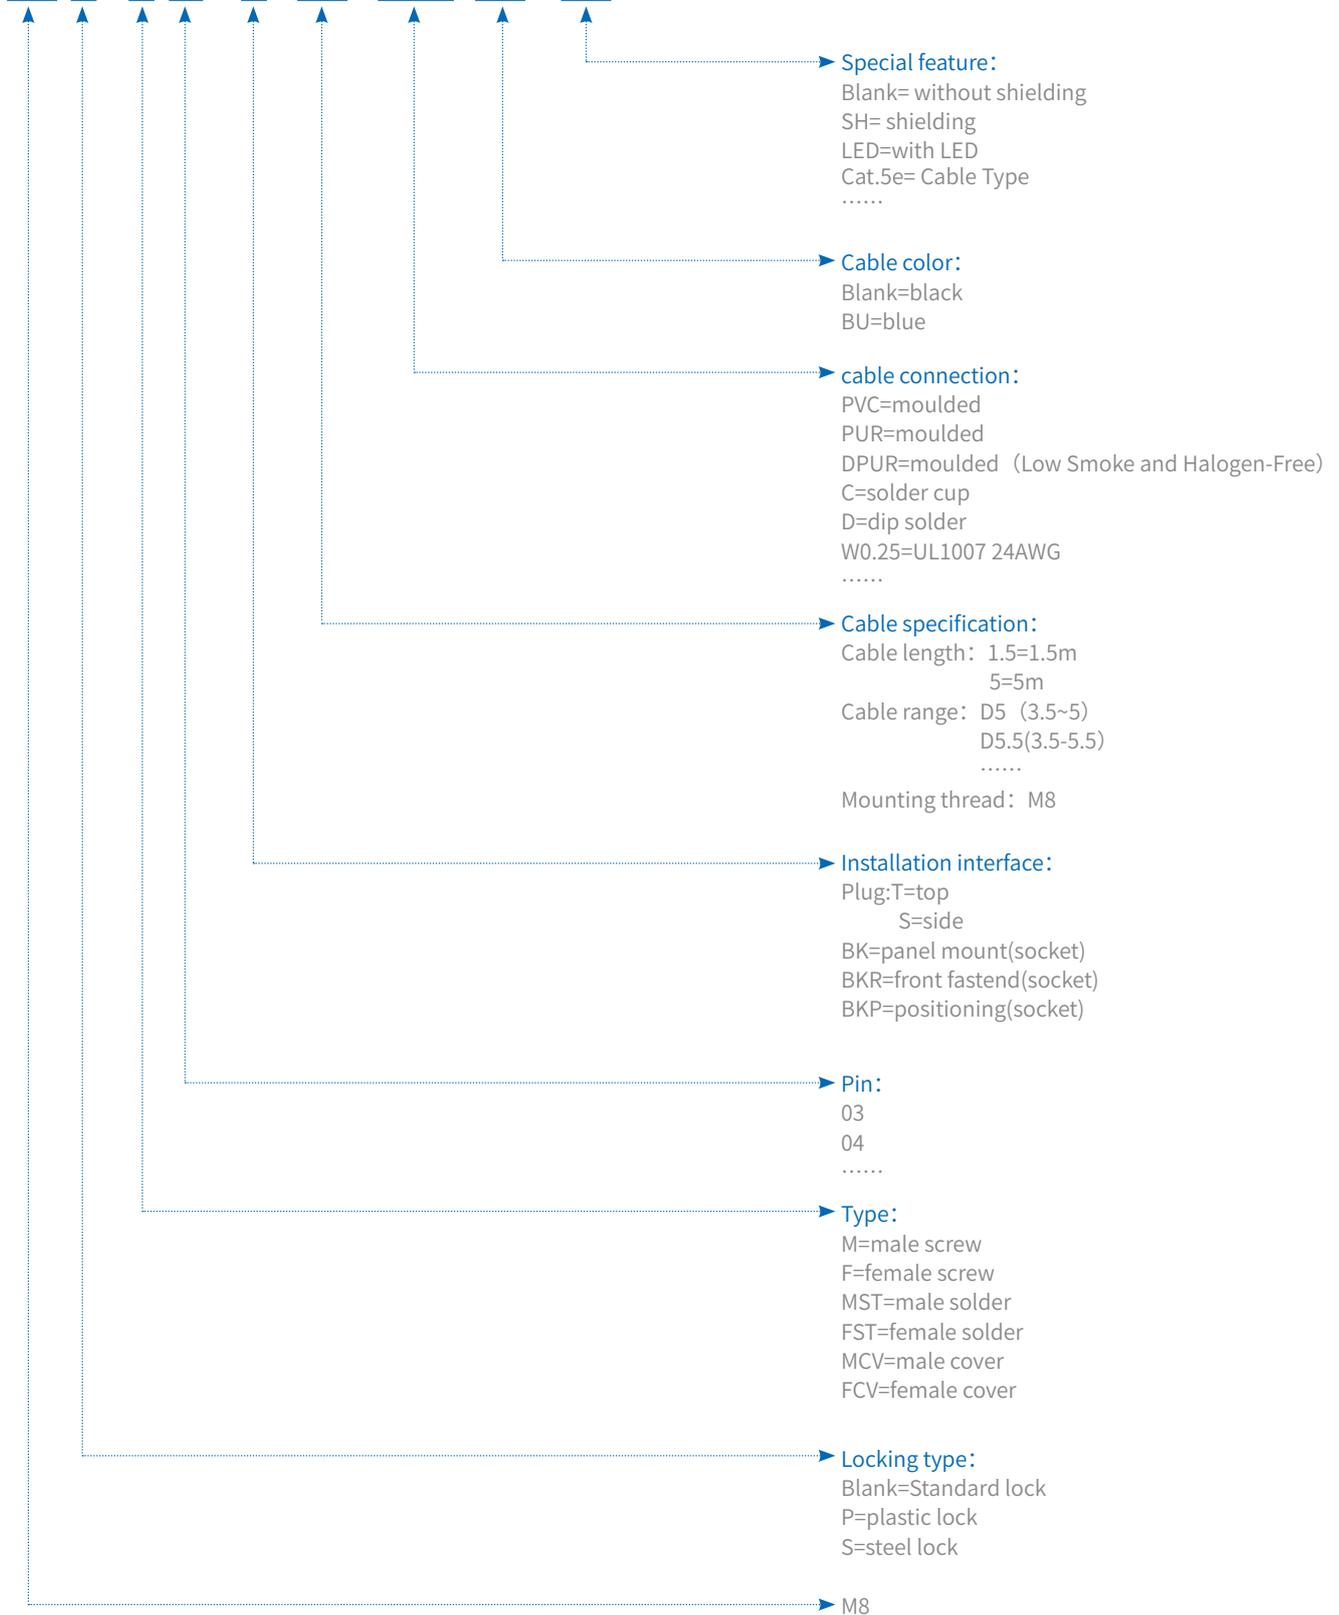

## Cable Connector

- Versions with assembly
- Thread locking M8x1
- Screw-, solder termination
- Connector moulded on cable
- Degree of protection IP67/IP65

## • Assembly instruction

- Strip length cable connectors

	Screw termination	solder version
Strip length A/mm	4mm	3mm

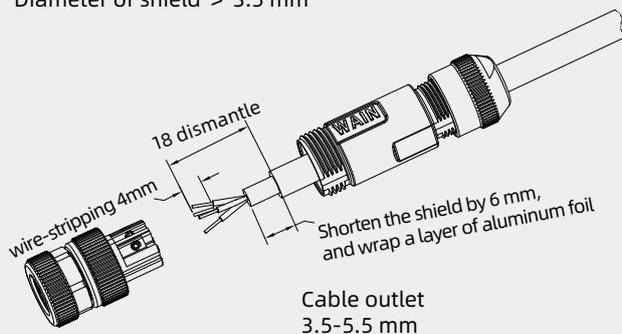

- Straight cable connectors, shielded, solder

1. Put the cable through all the parts of the connector.
2. Strip, shorten, widen shield and lay around shielding ring.
3. Bead single wires through housing, mount shielding ring, sealing ring and pinch ring. Slightly tighten pressing screw to fix the cable. Bead insulating tube, solder single wires and mount insulating tube.
4. Screw male or female contact carrier to housing and tighten pressing screw.
5. Angled version: tighten locking screw.

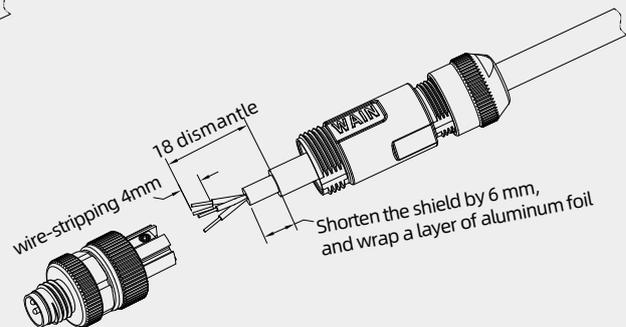

### Straight cable connectors, shielded, screw clamp connection

- Diameter of shield > 3.5 mm

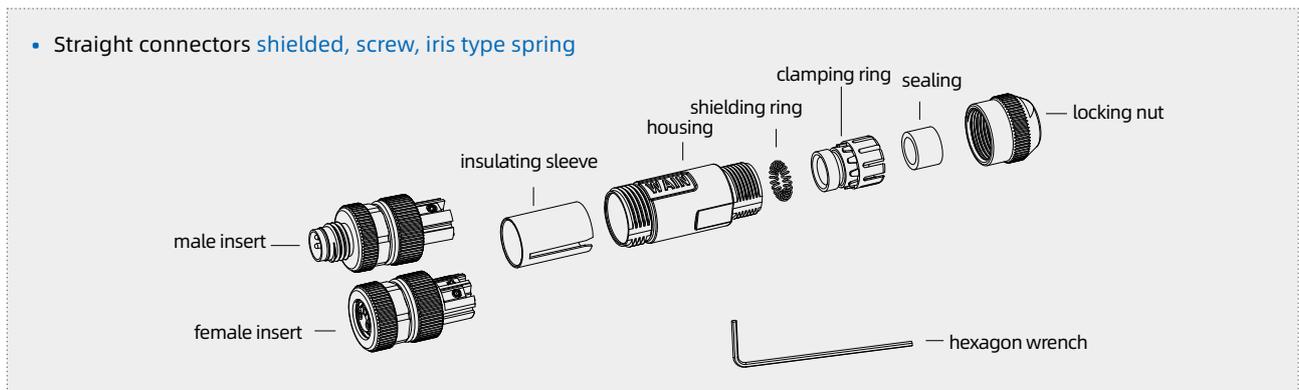

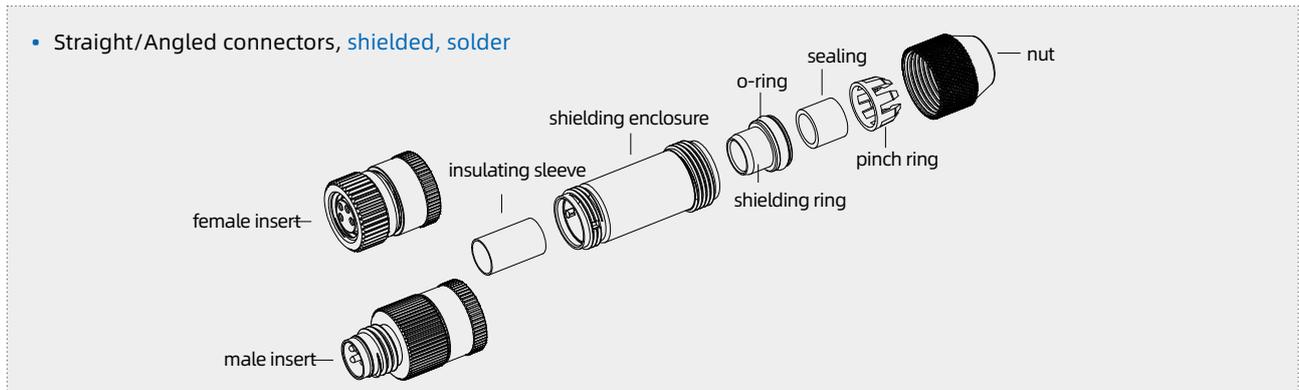

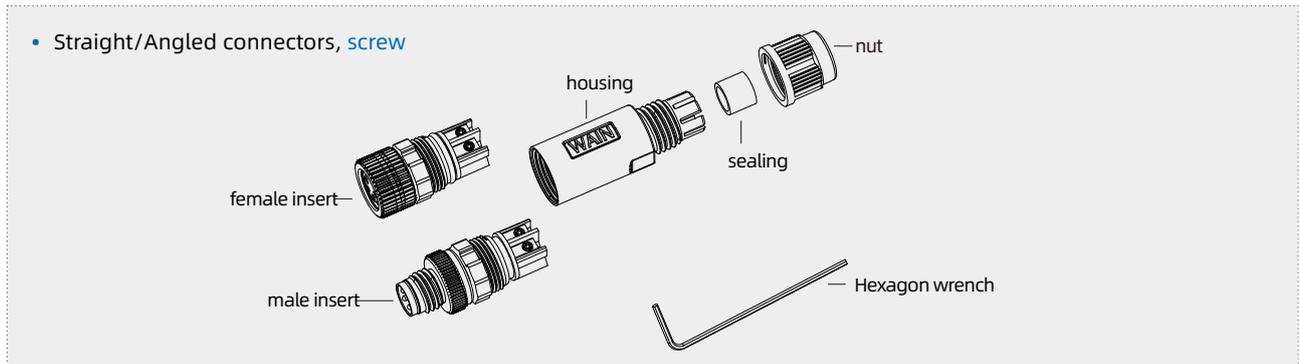

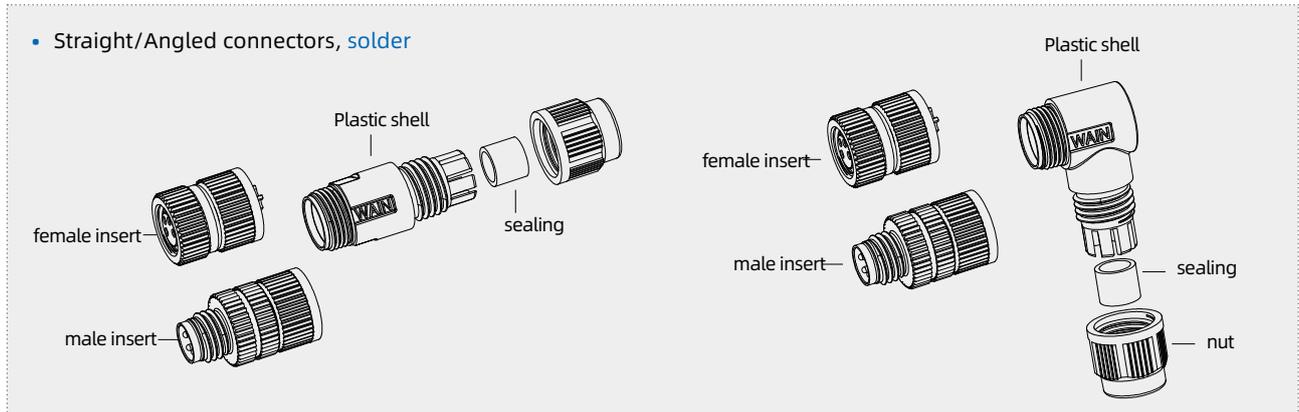

1. Put the cable through the housing.
2. Strip cable, shorten shielding braid.
3. Connect single wires.
4. Screw housing to either male or female contact carrier and tighten pressing screw.

- Diameter of shield ≤ 3.5 mm

1. Put the cable through the housing.
2. Strip cable, shorten shielding braid, place it over cable coating and wrap it with copper tape.
3. Connect single wires.
4. Screw housing to either male or female contact carrier and tighten pressing screw.

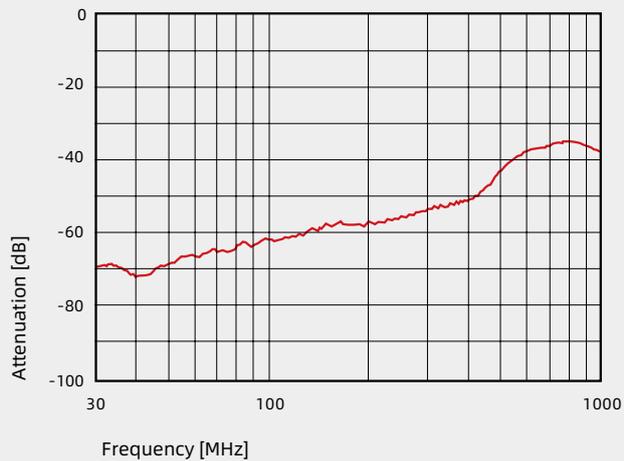

## • Component part drawing

- Rating

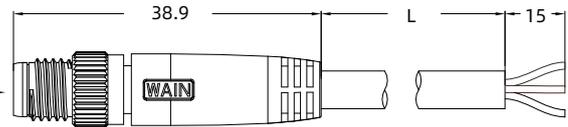

- Attenuation curve

- Attenuation curve according to DIN 47250-6

## Cable Connector

- Shielded / unshielded series
- Installable series and moulded cable series
- Thread locking M12X1
- Screw terminal and welding terminal
- Shielding ring and ring spring shielding connection
- Cable length 1.5m and 5m
- Other cable length upon request, minimum order quantity 200 pieces
- Cable material can be customized according to requirements
- Degree of protection IP67/ IP68
- Transparent case for PCB with LED

- Male
- Plastic locking system
- Screw clamp connection

• Assembly instruction

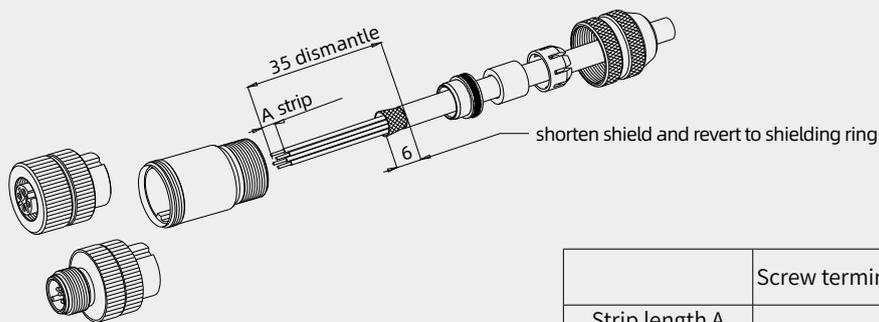

- Strip length male/female cable connector, male/female angled connector, **not shielded**

- Strip length male/female cable duo connector, male/female angled duo connector, **not shielded**

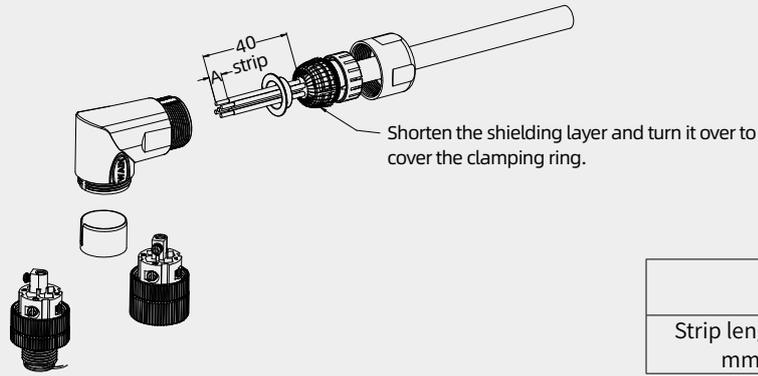

- Strip length male/female cable connector, **with shielding ring**

	Screw termination	solder version
Strip length A mm	5mm	3.5mm

• Assembly instruction

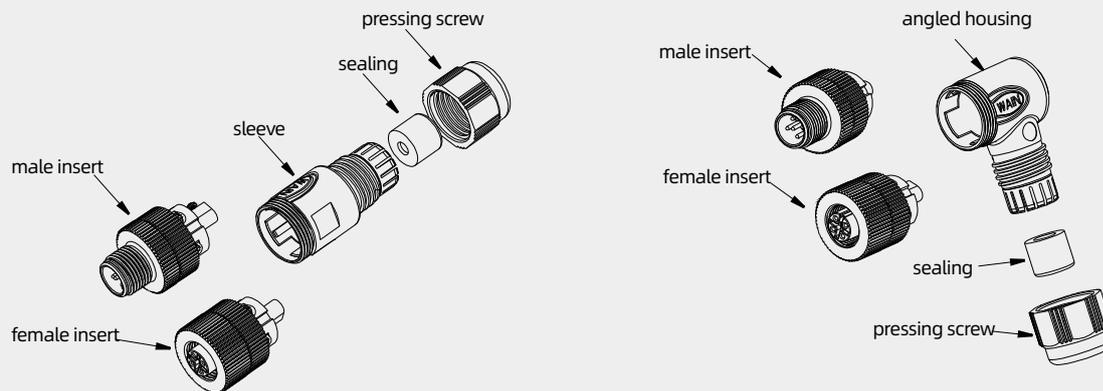

- Stripping length of male/female angled cable connector , with shielded ring.

	Screw termination	solder version
Strip length A mm	5mm	3.5mm

• Component part drawing

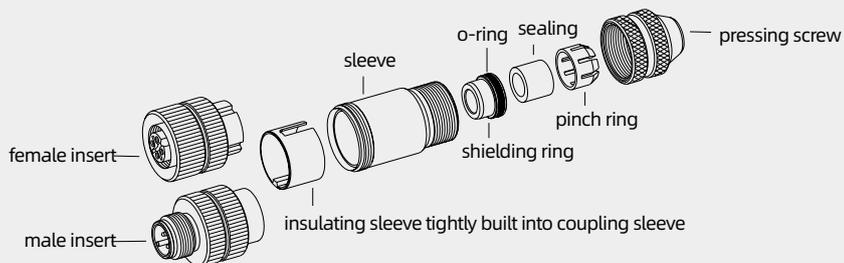

- Cable connector **not shielded**

- Duo-cable connector **screw termination, not shielded**

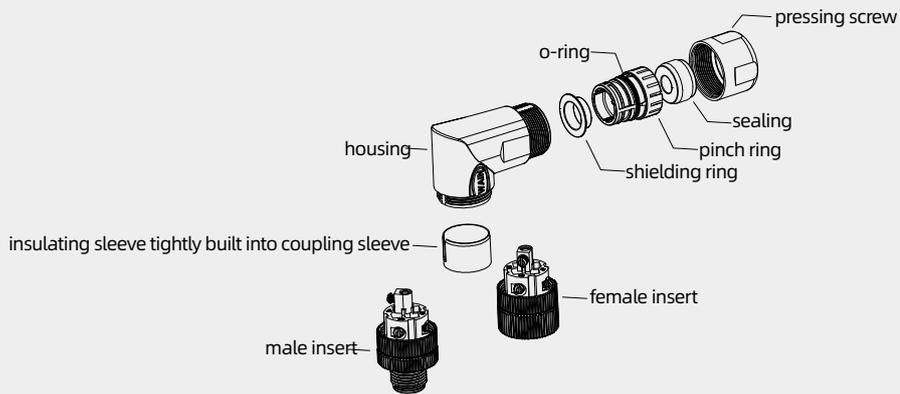

- Cable connector **with shielding ring**

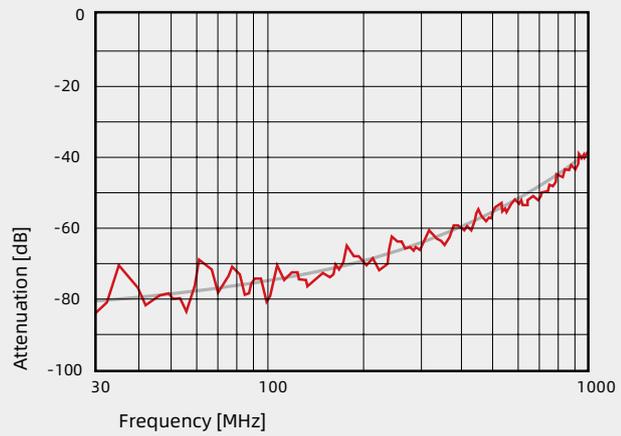

- Component part drawing

- Angled connector [Screw termination, shielded](#)

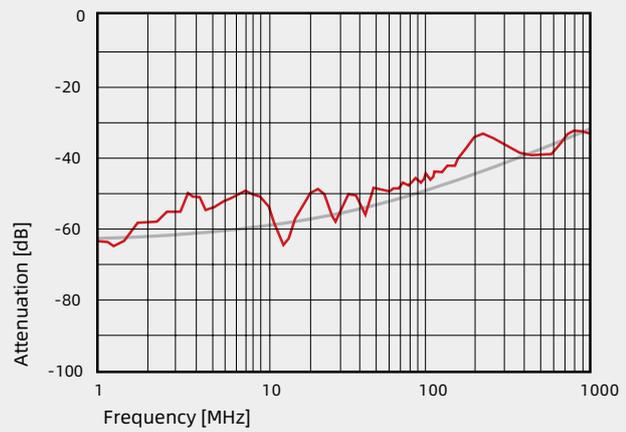

• Rating

- Attenuation curve according to DIN 47250-6
- For straight cable connectors, with shielding ring

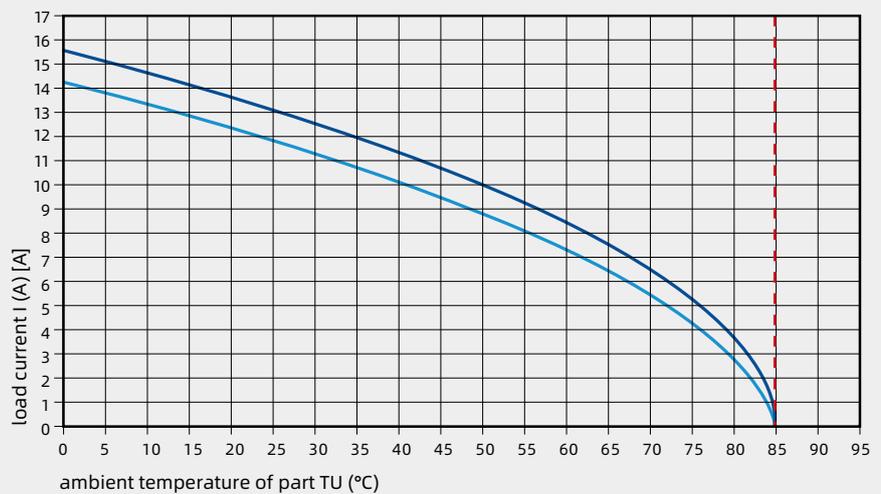

- Attenuation curve according to DIN 47250-6
- For straight cable connectors, with iris type spring

- Derating curve according to DIN EN 60512 for POWER cable connectors

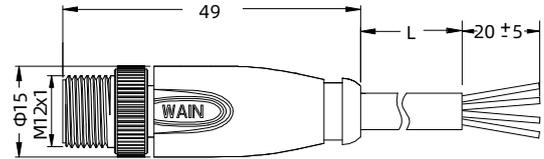

- A-coding 4 pole version
- A-coding 5 pole version

## Cable Connector

- Shielded / unshielded series
- Installable series and moulded cable series
- Thread locking M12X1
- Screw terminal
- Shielding ring and ring spring shielding connection
- Cable length 1.5m and 5m
- Other cable length upon request, minimum order quantity 200 pieces
- Cable material can be customized according to requirements
- Degree of protection IP67
- Anti-loose spring with nut

- **Male**
- Plastic locking system
- Screw clamp connection

**Straight cable connectors**  
125/250V 4A

• Assembly instruction

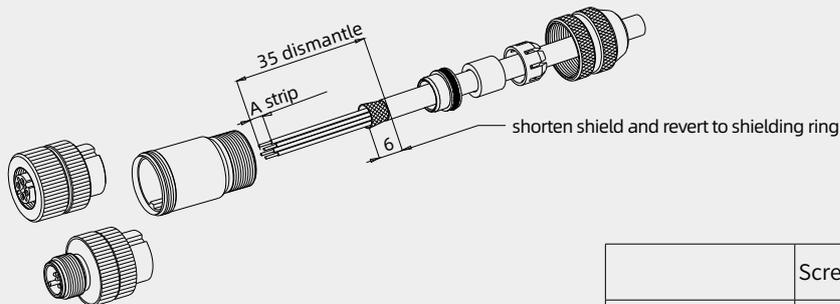

- Strip length male/female cable connector, male/female angled connector, **not shielded**

- Strip length male/female cable duo connector, male/female angled duo connector, **not shielded**

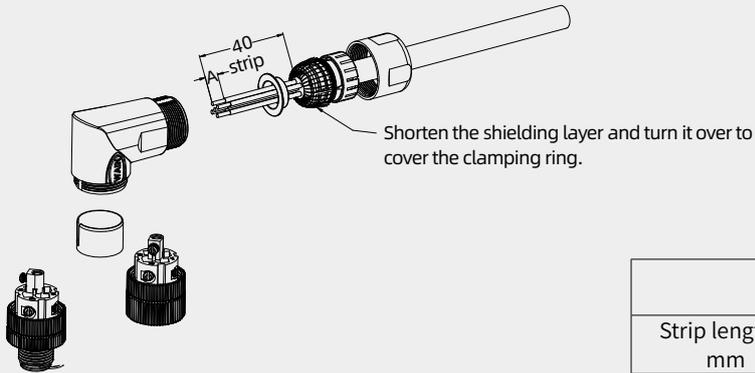

- Strip length male/female cable connector, **with shielding ring**

	Screw termination
Strip length A mm	5mm

- Assembly instruction

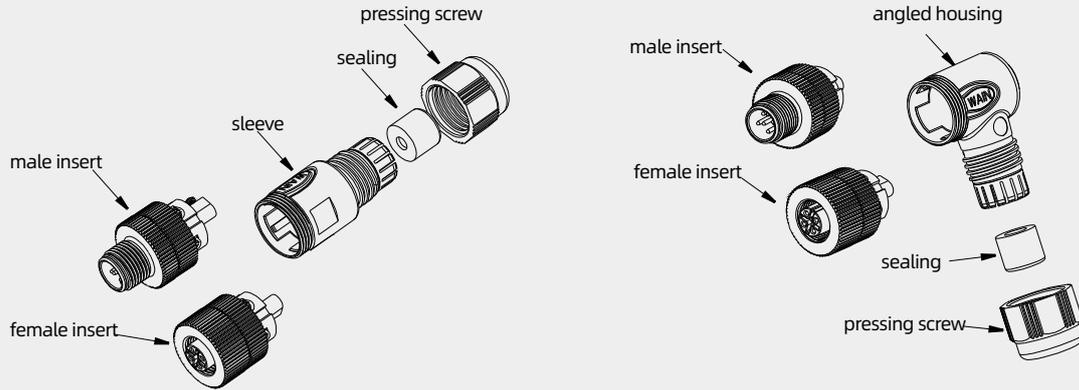

- Stripping length of male/female angled cable connector , with shielded ring.

	Screw termination
Strip length A mm	5mm

## • Component part drawing

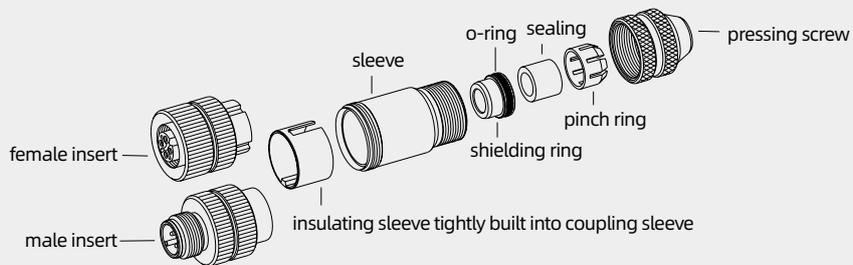

- Cable connector **not shielded**

- Duo-cable connector screw termination, **not shielded**

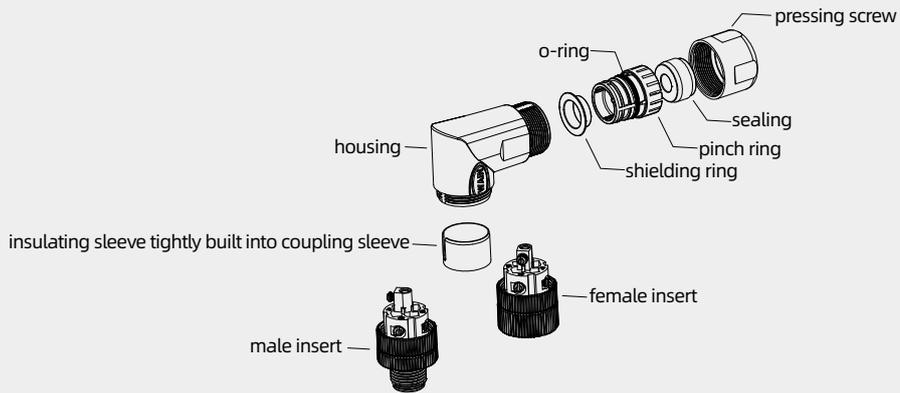

- Cable connector **with shielding ring**

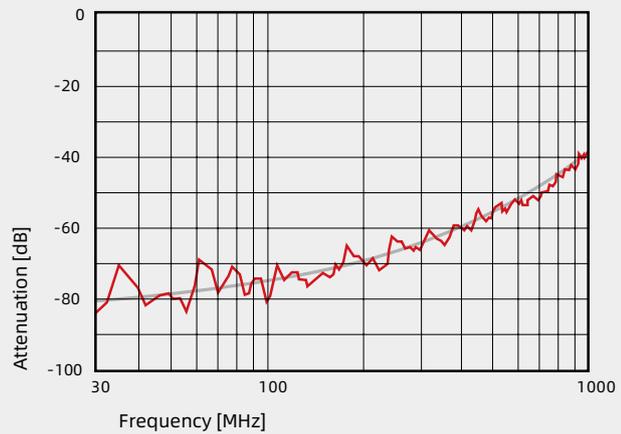

- Component part drawing

- Angled connector Screw termination, shielded

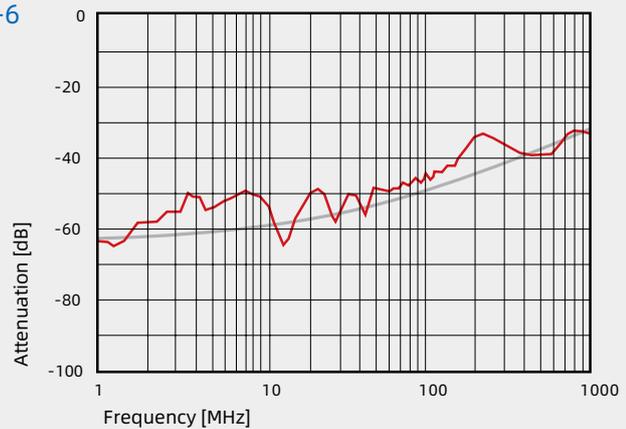

• Rating

- Attenuation curve according to DIN 47250-6
- For straight cable connectors, with shielding ring

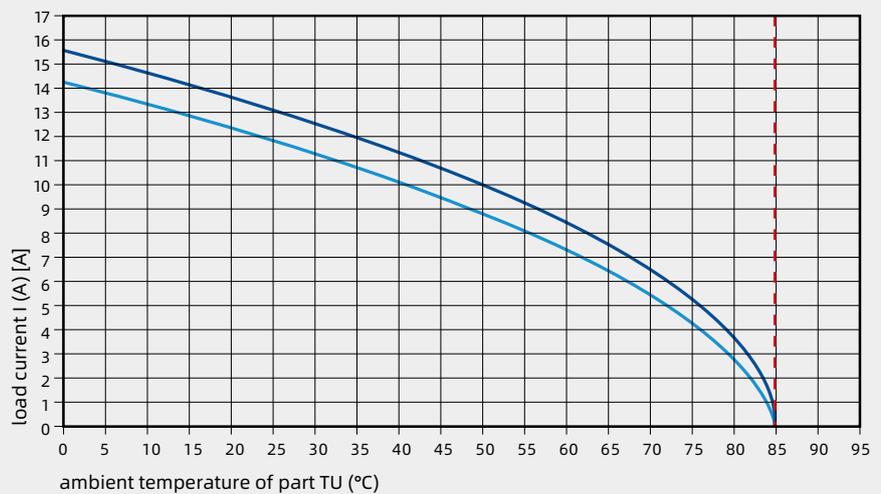

- Attenuation curve according to DIN 47250-6
- For straight cable connectors, with iris type spring

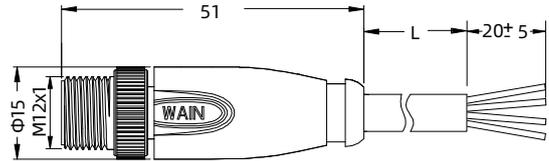

- Derating curve according to DIN EN 60512 for POWER cable connectors

- 4 pole version
- 5 pole version

- Male
- Moulded
- Screw
- Shielded
- Recommended use

**Straight cable connectors, cable**  
125/250V 4A

Specifications	
DIN EN 60 664	DIN EN 61 984

Electrical data			
Number of contacts	7(6+PE)	12	17
Rated current	14A	7A	3.6A
mm <sup>2</sup> / AWG	(0.03-1.5 mm <sup>2</sup> / AWG 32-16)	(0.03-1.0 mm <sup>2</sup> / AWG 32-18)	(0.14-0.5 mm <sup>2</sup> / AWG 26-20)
Rated current	630 V	32 V	63 V
Test voltage Urms	6kV	1.5kV	1.5kV
Pollution degree	3	3	3
Flammability acc. to UL 94	V0 (UL94)	V0 (UL94)	V0 (UL94)
Surge voltage category	III	III	III

Mechanical data	
Housing material	Copper alloy, zinc alloy
Housing surface	Nickel-plated
Contact resistance	≤ 5 mΩ
Insulating bodies	PBT
Contact material	Copper alloy
Contact surface	Hard-gold plated
Mechanical working life	>500
degree of protection	IP67
Temperature range	-40°C ...+130°C

- M23 Circular connector-Signal Connection

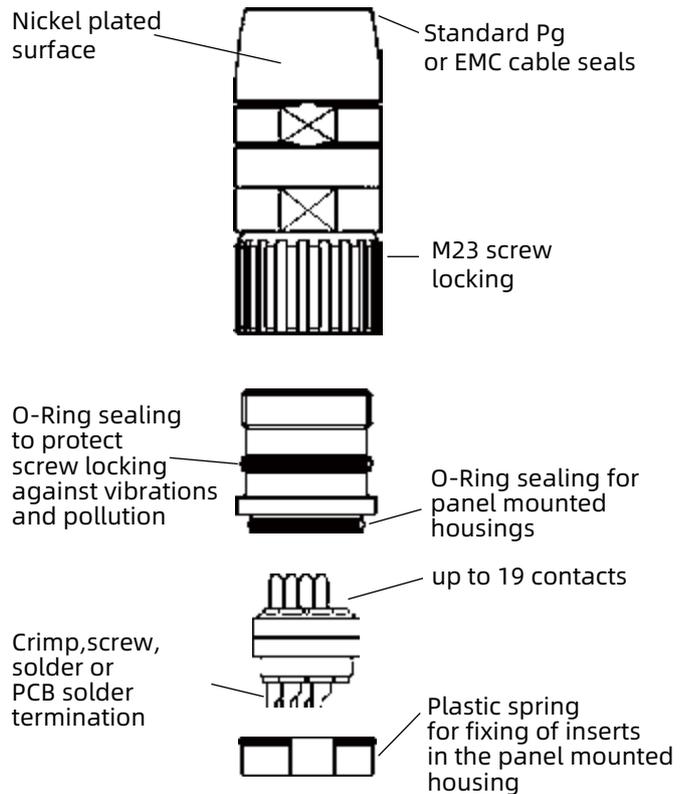

## • Features

### • Size R 23

- Outer diameter 26 mm
- High contact density
- Very robust hoods and housings
- Corrosion resistant
- Excellent EMC properties (with continuous shielding)
- Quick and easy assembly
- Vibration resistant screw locking system
- Up to 19 contacts, 25 V~ / 60 V-
- Ideal for applications such as measurement and automatic control

## • HR23 - Technical characteristics

### Specifications

DIN EN 60 664    DIN EN 61 984

Inserts	
Number of contacts	6
Electrical data acc. to EN 61 984	
Rated current	
- power contact	15A
Rated voltage of pollution	25 V~/60 V-
Test voltage Urms	1.5 kV
Insulation resistance	≥ 1012 Ω
Material	PBT
Temperature range	-40°C ...+130°C
Flammability acc. to UL 94	V0

Contacts	
Material	Copper alloy
Surface	Gold plated
Contact resistance	≤ 5 mΩ
Screw termination	
- power contact	0.14-1.0 mm <sup>2</sup> / AWG 26-16
Solder termination	
- power contact	0.14-2.5 mm <sup>2</sup> / AWG 26-14
PCB solder termination	
- power contact	Φ1.5 mm
- reference to bulkhead mounted housing	3.5 mm

Inserts	
Number of contacts	7
Electrical data acc. to EN 61 984	
Rated current	
- power contact	15A
Rated voltage of pollution	25 V~/60 V-
Test voltage Urms	1.5 kV
Insulation resistance	≥ 1012 Ω
Material	PBT
Temperature range	-40°C ...+130°C
Flammability acc. to UL 94	V0

Contacts	
Material	Copper alloy
Surface	Gold plated
Contact resistance	≤ 5 mΩ
Screw termination	
- power contact	0.14-1.0 mm <sup>2</sup> / AWG 26-16
Solder termination	
- power contact	0.14-2.5 mm <sup>2</sup> / AWG 26-14

Inserts	
Number of contacts	9
Electrical data acc. to EN 61 984	
Rated current	
- power contact	1x15A
- signal contact	8x7A
Rated voltage of pollution	25 V~/60 V-
Test voltage Urms	1.5 kV
Insulation resistance	≥ 10 <sup>12</sup> Ω
Material	PBT
Temperature range	-40°C ...+130°C
Flammability acc. to UL 94	V0

Contacts	
Material	Copper alloy
Surface	Gold plated
Contact resistance	≤ 5 mΩ
Screw termination	
- power contact	0.14-1.0 mm <sup>2</sup> / AWG 26-16
- signal contact	0.14-0.75 mm <sup>2</sup> / AWG 26-18
Solder termination	
- power contact	0.14-2.5 mm <sup>2</sup> / AWG 26-14
- signal contact	0.14-1.0 mm <sup>2</sup> / AWG 26-16

- Standard hood and housing

- EMC hoods

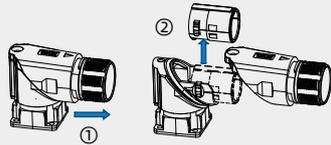

- Right angled bulkhead mounted housing

- Right angled bulkhead mounted housing:HR23-BKP-SE-OD2.7

- Right angled bulkhead mounted housing:HR23-BKP-SE-OD2.7

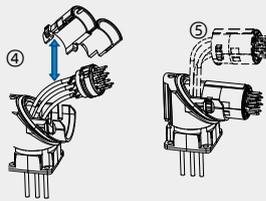

1: Pull out the upper cover horizontally, and then take out the inner insert fixed part.

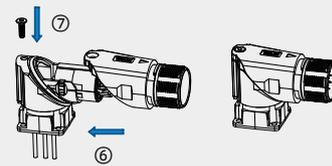

2: insert wiring  
 a. The cable passes through the fixed base.  
 b. Strip the wire insulation husk, and then weld it to the pins of the insert.

3: install the insert fixed part  
 a. Fasten the open fixed part with the insert; the location gap of the insert should align with the location salient point of the fixed part.  
 b. Insert the fixed part which installed the insert to the slot of the base.

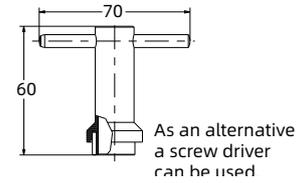

4: Lock the upper cover, and the installation is completed.

• Application  
For bulkhead mounted and cable to cable housings and hoods: HR23-CCT-EMC

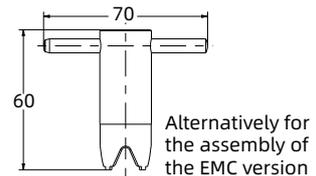

Assembly tool

Designation	Order No.
HR23-TL01/N	198 001 003 0004

Application  
For hoods:  
HR23-TE-PG11  
HR23-TE-M20

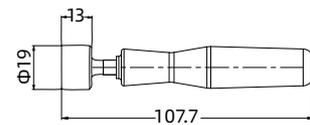

Assembly tool

Designation	Order No.
HR23-TL02/N	198 001 003 0005

• Application  
For angled bulkhead mounted housings:  
HR23-BK-SE-OD2.7

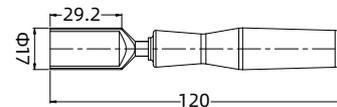

Assembly tool

Designation	Order No.
HR23-TL03	198 001 003 0006

• Application  
For housings:  
(except angled bulkhead mounted and EMC housings)

Assembly tool

Designation	Order No.
HR23-TL04	198 001 003 0014

- MR23 - Technical characteristics

Specifications	
DIN EN 60 664	DIN EN 61 984

Electrical data			
Number of contacts	6	7	12
Rated current	20A	20A	7A
mm <sup>2</sup> / AWG	(0.35-2.5 mm <sup>2</sup> / AWG 22-14)	(0.03-1.0 mm <sup>2</sup> / AWG 32-16)	(0.03-1.0 mm <sup>2</sup> / AWG 32-18)
Rated current	300 V	300 V	160 V
Test voltage Urms	2.5 kV	2.5 kV	2.5 kV
Pollution degree	3	3	3
Flammability acc. to UL 94	V0 (UL94)	V0 (UL94)	V0 (UL94)
Surge voltage category	III	III	III

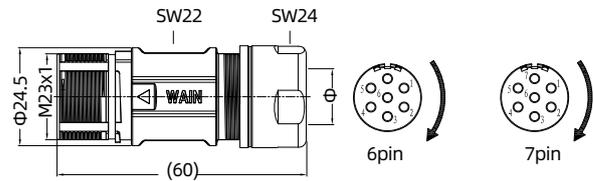

Electrical data	
Number of contacts	17
Rated current	7A
mm <sup>2</sup> / AWG	(0.03-1.0 mm <sup>2</sup> / AWG 32-18)
Rated current	125 V
Test voltage Urms	2.0 kV
Pollution degree	3
Flammability acc. to UL 94	V0 (UL94)
Surge voltage category	III

Electrical data	
Number of contacts	19(16+3)
signal	0.03-1.0 mm <sup>2</sup> / AWG 32-18
power	0.14-1.5 mm <sup>2</sup> / AWG 20-16
Rated current	7A
Rated voltage	63 V
Test voltage Urms	1.5 kV
Pollution degree	3
Flammability acc. to UL 94	V0 (UL94)
Surge voltage category	III

Mechanical data	
Housing material	Copper alloy, zinc alloy
Housing surface	Nickel-plated
Contact resistance	≤ 5 mΩ
Insulating bodies	PBT
Contact material	Copper alloy
Contact surface	Hard-gold plated
Mechanical working life	>500
degree of protection	IP67
Temperature range	-40°C ...+130°C

Specifications	
DIN EN 60 664	DIN EN 61 984
Number of contacts	4/4
Electrical properties	
-Rated current	63A (power) 20A (signal)
-Rated voltage	630V (power) 250V (signal)
-Rated impulse voltage	6000V (power) 4000V (signal)
-Contact resistance	$\phi 3.6$ (power): $\leq 1 \text{ m}\Omega$ $\phi 2$ (signal): $\leq 3 \text{ m}\Omega$
Materials and surface treatment	
-Hoods/Housings	The copper alloy/zinc alloy plating nickel
-contact	gold-planted copper alloy
-Insulating material	PA
-Sealing element	FKM
Mechanical properties	
-Mechanical working life	$\geq 500$
-Lock mode	Thread locking
-Cable and outlet diameter	$\phi 19-21.5/\phi 22$
Environmental performance	
-Working temperature	-40°C ...+130°C
-Degree of Protection	IP67
-Pollution Degree	3

### Tools

#### Crimping tool

#### Contact removal tool

Wire gauge	Designation	Order No.
4/6/10 mm <sup>2</sup>	TL02-3G	198 002 000 0013
0.14-4 mm <sup>2</sup>	TL02G	198 001 001 0011

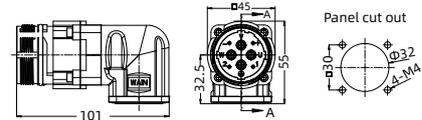

Application	Designation	Order No.
for crimp contacts 75A	M40-TL01	198 001 000 0027
for crimp contacts 30A	M40-TL02	198 001 000 0028

Notes: The tools for crimp terminal may influence the product quality and stability. Please select the tools recognized by our company.

- M40-MC04/4-BKP-SE Power connector

1: Open the upper cover horizontally

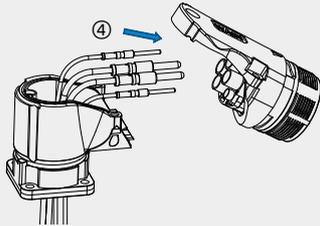

2: pin wiring

- a、 The cable passes through the fixed base.
- b、 Strip the wire insulation husk, and then weld pin to the wire.

	Stripping length(X)
30A	7 mm
75A	10 mm

3: Insert the pins to the corresponding insert holes in order.

4: Lock the upper cover, and fasten the screws. The installation is completed.

## Advantages:

- The male plug is provided with a quick-connect nut anti-rotation device to play the role of nut anti-rotation.
- Increase the assembly clearance of pin to prevent damage of connector caused by thermal expansion and cold contraction.
- Add a variety of coding to the insertion of male and female plugs to avoid wrong insertion.
- Color codes distinguish three - phase cables.
- Double crown spring is adopted to increase the contact area of male and female pins.
- Protection against electric shock.
- Add the wire size mark to the pin.

## • Technical characteristics

### Specifications

DIN EN 60 664    DIN EN 61 984

#### Electrical parameters :

Number of contacts	1
Rated current	800A
Rated voltage	1000V
Test voltage Urms (AC)	12KV
Wire gauge	240mm <sup>2</sup>
Surge voltage category	III
Pollution degree	3

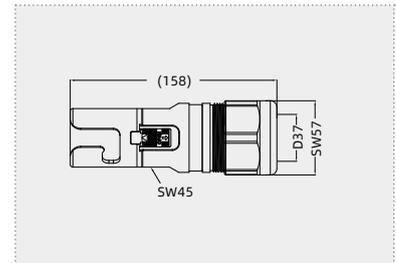

#### Mechanical data

Housing material	PA
Contact material	Copper alloy
surface	Hard-gold plated
Terminal	Crimp version
Gasket and O ring	FPM
Ambient temperature	-40°C ...+125°C
Locking type	Quick lock
Mechanical working life	> 100
Degree of protection	IP65
Cable diameter	32-37mm
